

Standard Risk Control Arrangements

Standard Risk Control Arrangements (SRCA's) confirm the minimum standard Mansell has set to manage many of the common activities within the building industry.

All staff and Operatives must strive to achieve and improve upon the standards set within the SRCA's.

Management must ensure that arrangements are suitable and sufficient, and add Local Arrangements as appropriate to each Project.

Managers can opt out of an individual SRCA, but **must** do so through a formal Risk Assessment (SM-FM-17), to ensure that the revised method of working is safe and environmentally aware.

SRCA's may be used for the following purposes:

- Site Rules sign-posted from the Project Management Plan
- Checklists to help evaluate Sub-Contractors Risk Assessments
- Criteria for Inspection and Auditing
- Defining Mansell policy where legislation is non-prescriptive

INDEX			
No.	Title	Revision	Revised/ New
1	Mansell Management	10	-
2	Mansell Employees	06	-
